Supplementary information

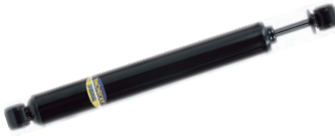

!	Excluding self levelling suspension
~	Imported
“ .. ” “ ... ”	Special order – phone 010 900 1850 6-12 week waiting period
bold	Heavy duty
<u>underlined</u>	Not immediately available
> <i>italic</i>	While stocks last
	Steering damper
PK...	Protection kit part number
MK...	Mounting kit part number
AK...	Replacement bolt or spring part number
#	Internal bump-stop

Important installation information

*1	Re-use original locking screw from vehicle
*2	Balancing weights may need to be transferred from the old shocks to the new
*3	Certain '84-'92 models may need spacers placed below the cartridge in the strut tube
*4	Contact our help desk on 011 574 5603 if you require assistance with rod top end diameter and length
*5	When replacing Original Equipment with replacement market shocks the indicated Monroe springs must be fitted as well or the vehicle will sag
*6	If the vehicle uses Nivomat levelling shocks (no pipes) as original equipment then it is agents only
*7	Re-use existing original equipment top rubbers
*8	Re-use existing spring seat/pan
*9	Use correct torque
*10	Mounting angle critical, use tool K81
*11	If the OE shocks have weights in the upper mounting area, these are to be removed for the replacement part to fit in upper mounting
*12	SA1942 does not fit directly in place of the original equipment, but attaches to the drag link
*13	Check the original equipment part number on the old shock for the correct application
*14	Excluding bump stop and gaiter – use protection kit
*15	Shocks shorter due to internal rebound spring
*16	Remove second from the top spigot (curved) washer under the top rubber, just above the vehicle body

MONROE RANGE GUIDE

CHOOSE QUALITY THAT ENDURES FOR YOUR SHOCK & STRUT REPLACEMENTS

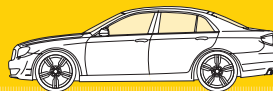

PASSENGER VEHICLES	 <p>Monroe shocks & struts</p> <ul style="list-style-type: none"> • High-quality premium shocks & struts for light vehicles • Built for safety: stop sooner, drive safer with new shocks • Designed for durability: key features make Monroe shocks last longer • Advanced technologies adapted to the type of vehicle: combustion and electric cars and bakkies • Five year warranty against manufacture or material defect.* 		
	 <p>Monroe Magnum – axle dampers</p> <ul style="list-style-type: none"> • Tough and reliable ultra-heavy-duty technology for medium and heavy commercial vehicles (trucks, buses, trailers) • Two year warranty against manufacture or material defect. 		
COMMERCIAL VEHICLES	 <p>Monroe Magnum – cabin dampers</p> <ul style="list-style-type: none"> • Heavy duty dampers to assist in maintaining the comfort and safety of the driver over bumpy roads • Helps support the weight of the truck cabin, and controls the swaying motion • Seat dampers also available • Two year warranty against manufacture or material defect. 		
	<p>Maxlift</p> <ul style="list-style-type: none"> • Gas charged lift supports • Functions like a gas spring to hold open doors, boots, bonnets, windows, hatches, etc. • Two year warranty against manufacture or material defect. 	<p>Protection Kits & Mounting Kits</p> <ul style="list-style-type: none"> • Extends the life of the shock, less claims, better handling, reduced noise • Five year warranty against manufacture or material defect.* 	<p>Steering Dampers</p> <ul style="list-style-type: none"> • Well priced, quality steering control in off-road and normal driving conditions. 
LIGHT COMMERCIAL VEHICLES	 <p>Monroe Gas-Magnum</p> <ul style="list-style-type: none"> • Value for money, advanced heavy-duty gas technology for bakkies, 4x4s and SUVs • Part numbers start with M... • Five year warranty against manufacture or material defect.* 		
	 <p>Monroe Adventure</p> <ul style="list-style-type: none"> • For drivers who want more. High pressure, mainly mono-tube, heavy-duty gas technology for SUVs, 4x4s and bakkies • Part numbers start with D... • Five year warranty against manufacture or material defect.* 		
	 <p>Rancho</p> <ul style="list-style-type: none"> • <i>Designed for hard-working vehicles</i> • RS9000 series is adjustable to <i>nine levels of performance</i>, with a nine-position easy-to-adjust knob for customised damping control and firmness for both on- and off-road flexibility • RS5000X series uses a unique, patented valving system and advanced compression functionality • Robust Tri-Tube (RS9000) and Twin-Tube (RS5000) designs • Three year warranty against manufacture or material defect.

WHAT ARE SHOCKS AND STRUTS?

SHOCKS AND STRUTS HELP KEEP YOUR VEHICLE'S TIRES IN CONTACT WITH THE ROAD

- ✓ Shocks and struts not only improve ride comfort but are necessary for safe handling.
- ✓ Shocks and struts maintain vertical loads placed upon the tires. This helps ensure consistent, firm tire-to-road contact.
- ✓ By providing resistance to vehicle bounce, roll and sway - as well as brake dive and acceleration squat - shocks and struts help to maintain a balanced ride.

Shock absorbers are individual components of the suspension system

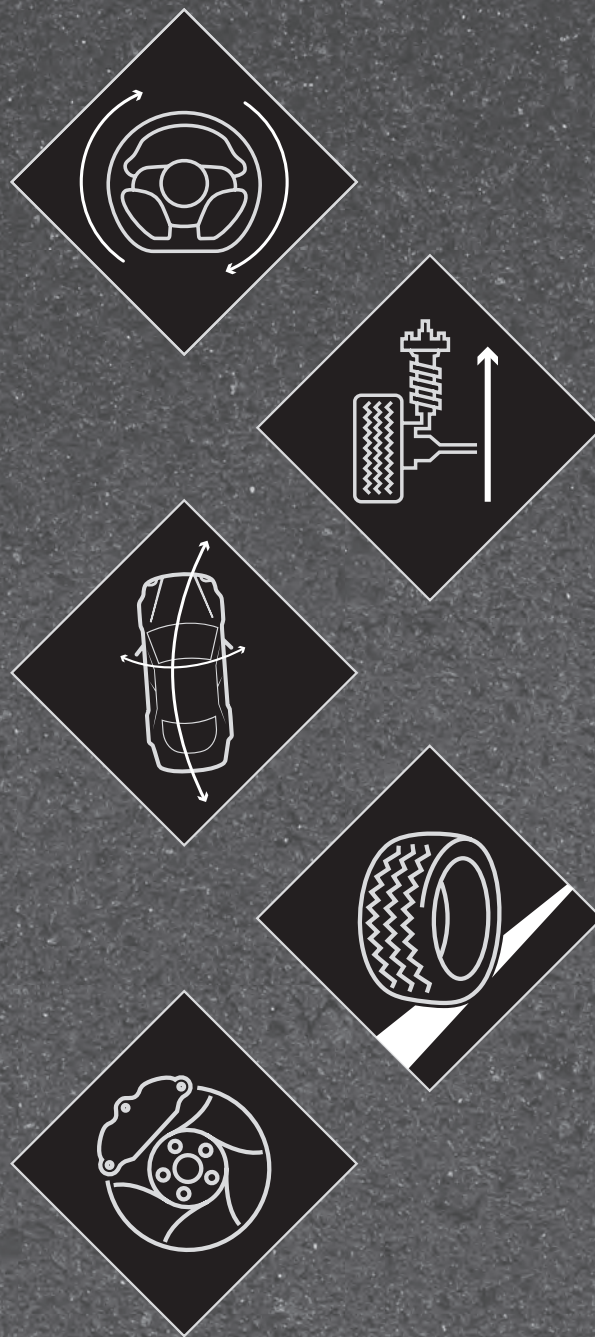

Struts are a major structural component of the vehicle chassis and suspension

WHAT DO SHOCKS AND STRUTS DO?

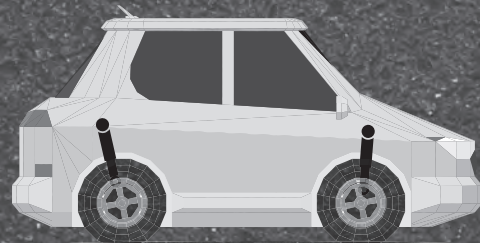

SHOCKS AND STRUTS PLAY A CRUCIAL ROLE IN A VEHICLE'S STEERING, STOPPING AND STABILITY

THE VITAL FUNCTIONS THAT RIDE CONTROL PRODUCTS PERFORM:

- Control excessive body and tire movement
- Reduce vehicle bounce, roll and sway plus brake dive and acceleration squat
- Help to maintain consistent handling and braking
- Help maintain wheel alignment
- Help to reduce the potential of premature wear on tires and other suspension components

FOR YOUR SAFETY
CHANGE YOUR SHOCKS!

FIND YOUR NEAREST DEALER
on www.MONROE.com

WHY TO REPLACE

It can be easy to overlook the gradual degradation of steering, stopping and stability caused over time by worn ride control components.

DISCUSS THE VEHICLE'S REPAIR HISTORY, THE WAY THE VEHICLE HANDLES AND ITS INTENDED USE.

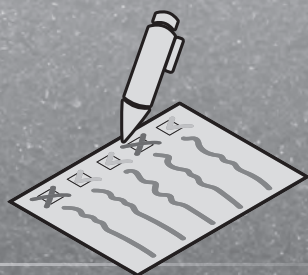

Have the shocks or struts been in service for 50,000 miles / 80,000 kilometres or more?

Does the vehicle require repeated replacement of front brakes, suspension components or tires?

Has the ride quality changed over time?

Is the vehicle used in any of the following ways:

- Towing
- Off-road use
- Consistently loaded
- Agricultural use
- Commercial use
- Upgraded with performance enhancements
- Consistently driven on unpaved roads

WHAT DOES YOUR ODOMETER READ?

50,000 Mile / 80,000 km Replacement recommendation* helps improve vehicle handling characteristics and comfort.

A fresh set of shocks can enhance more than just your ride. They help improve braking and handling under certain driving conditions and they make vehicles safer and easier to control. This helps make the road safer for everyone.

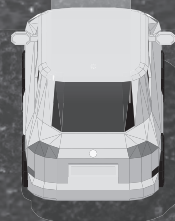

Just one degraded shock absorber on your vehicle can increase stopping distances under certain driving conditions.

*At 60 mph / 100 kph. Tests performed on dry, bumpy surface. Actual mileage may vary, depending upon driver ability, vehicle type, and type of driving and road conditions

SYMPTOMS OF PHYSICAL WEAR WHICH MAY INDICATE NEW SHOCKS AND STRUTS ARE REQUIRED:

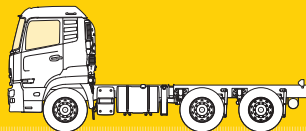

- ✓ Are there any signs of physical damage which could compromise the ride control unit's ability to function as intended?
- ✓ Is the rod bent, rusted, loose or scratched?
- ✓ Does the air shock have a torn or leaking air boot?
- ✓ Is fluid leaking down the side or on the bottom of the unit?
- ✓ Has corrosion compromised the integrity of any components which make up the shock or strut?
- ✓ Are non-replaceable bushings damaged or missing?
- ✓ Do the vehicle's tires display cupped, uneven or accelerated tire wear?
- ✓ Is the electronic unit producing a diagnostic code indicating failure?

NOTE: This may require additional electronic circuit diagnostics

#	Internal bump stop
⊕	Steering damper

- It is recommended that all new shock absorbers are fitted in pairs
- Do not mix gas and non-gas units on the same axle
- **Bold** part numbers indicate heavy-duty shocks
- Underlined part numbers indicate parts not immediately available
- *Italic* part numbers followed by > indicate parts to be discontinued
- *13 Check the OE part number on the old shock for the correct application

EF9277 8mm hole

Installation guide

- Always replace both lift supports to ensure top performance and to prevent twisting caused by uneven loading.
- Gas charged lift supports typically store a gas charge of over 330 Newton and cannot be compressed by hand.
- Gas charge lift supports can be installed in minutes with no special tools required.
- Careful inspection of all hinges and connecting points should be made for wear and tear or stress fractures. These should be replaced or repaired before lift supports installation.

Installation instructions

- Before removing old lift supports, examine any fittings supplied to determine which components must be re-used.
- Have someone hold the hatch, bonnet, boot or rear window open while replacing the lift supports
- The new lift support must be installed in the same position as the old one which was removed.
- Do not remove both lift supports at the same time. Replace one, then remove and replace the second one.
- Gas spring orientation i.e. it is important that the gas spring be mounted with the tube up in the closed position as this ensures lubrication and smooth operation

Important notes

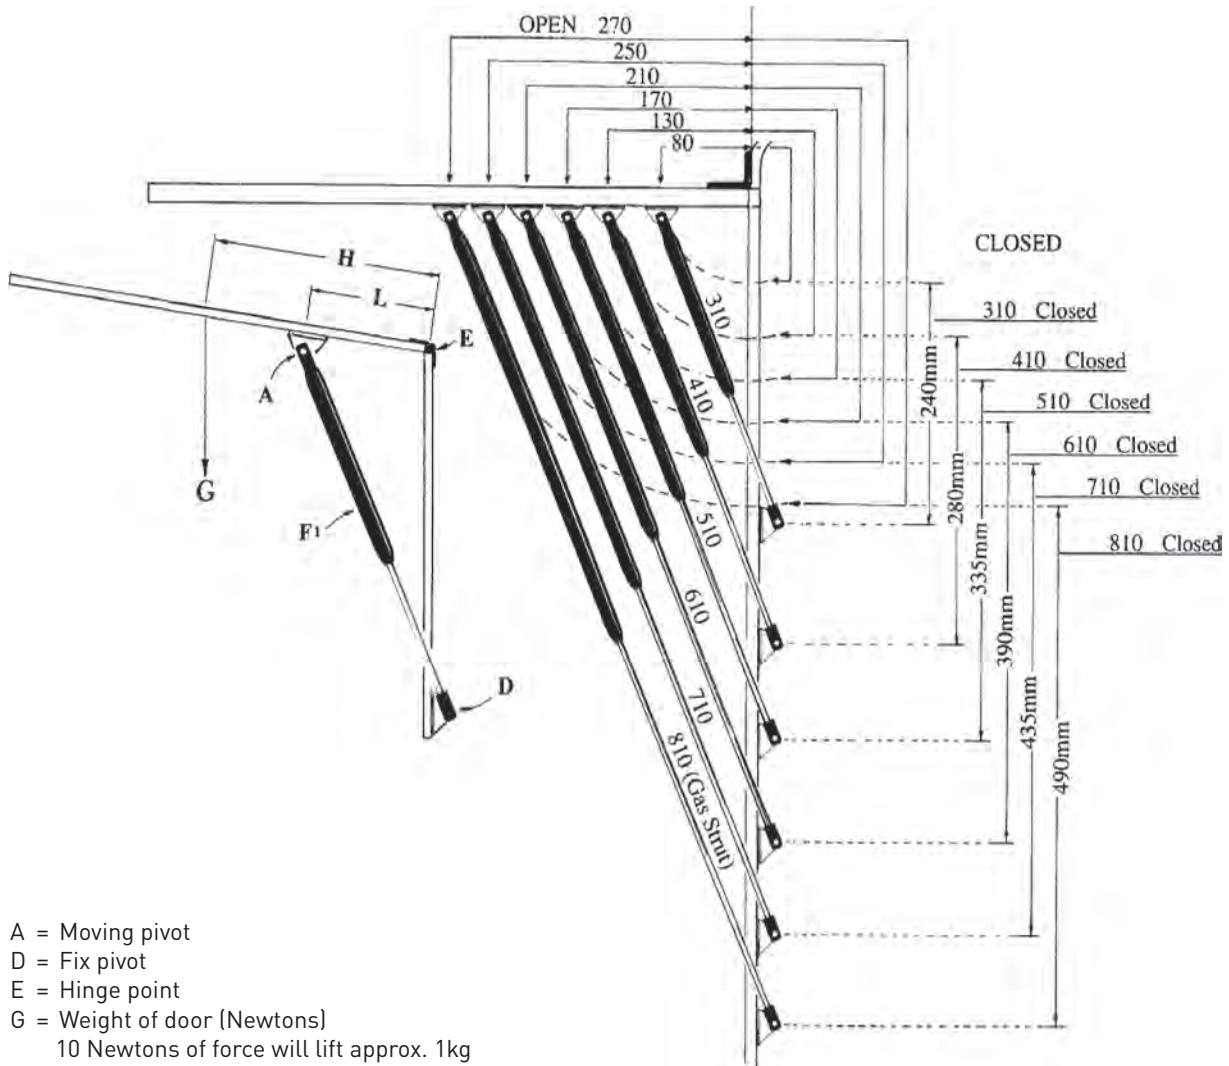

When ordering a gas spring, please consider the following:

- Overall length from centre to centre (extended)
- Pressure
- Type of end fittings
- Year, make and model of vehicle

How to measure a gas spring

- Overall length is measured with strut fully extended and taken between the centre's of the fixing studs.
- Stroke is measured between top of strut barrel and end of shaft fitting.

How to measure a Maxlift

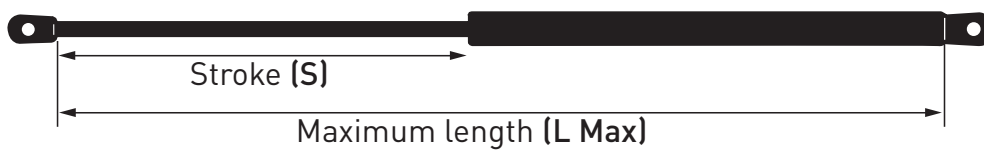

- A = Moving pivot
- D = Fix pivot
- E = Hinge point
- G = Weight of door (Newtons)
10 Newtons of force will lift approx. 1kg
- H = Half the depth of door
- F¹ = Force required
- L = Distance from hinge E to moving pivot A

Formula: $F^1 = \frac{G \times H}{L} + 15\%$ ÷ the number of gas springs required

Special note

Reducing the measurement from Point A to hinge point E by 20mm will give you an extra 10° (degrees) lift.

Universal

- It is recommended that all new shock absorbers are fitted in pairs
- Do not mix gas and non-gas units on the same axle
- **Bold** part numbers indicate heavy-duty shocks
- Underlined part numbers indicate parts not immediately available
- *Italic* part numbers followed by > indicate parts to be discontinued

Identification of shock absorber mountings and matching shock absorbers

1. How to measure shock absorbers

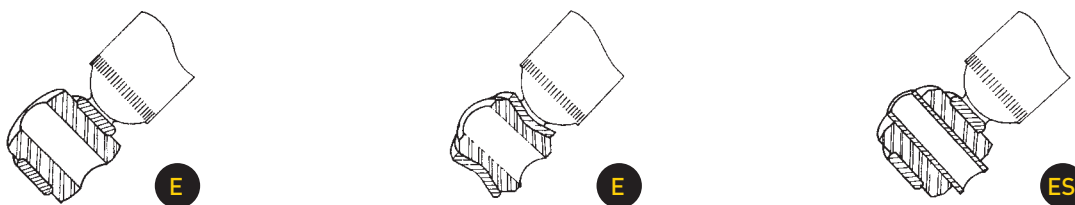

2. Mounting combinations

a. Eye combinations

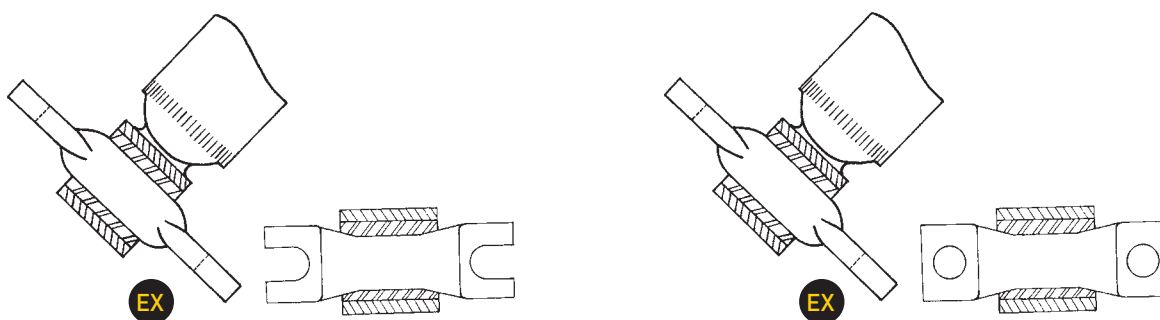

All eye combinations are identified by the prefix "E" followed by one of the following:

E: Rubber fitted to eye with no metal sleeve, cross stem or bolt

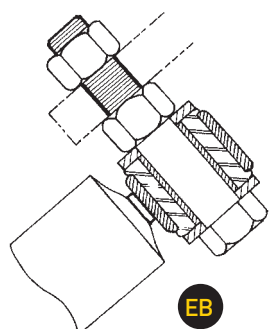

S: Metal sleeve fitted in rubber

X: Cross stem fitted in rubber

B: Bolt fitted in rubber

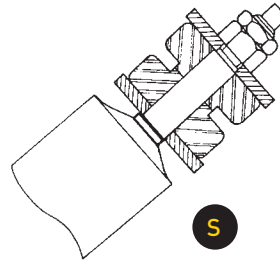

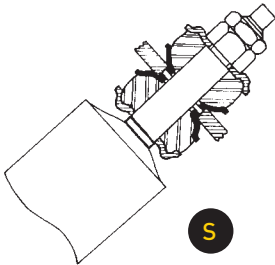

This code is followed by three digits which signifies our internal coding for the eye and the type of mounting combination.

Identification of shock absorber mountings and matching shock absorbers

b. Stud combinations

All stud combinations are identified by the prefix "S" followed by two digits signifying the nominal shank diameter, measured in millimetres.

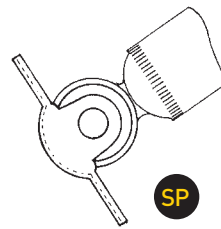

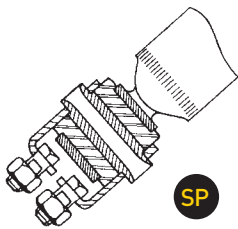

NB: All integral rods, i.e. where the stud form is machined directly on the rod, are classified as "SP" as these units are unique to each application and therefore cannot be matched.

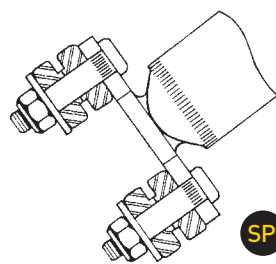

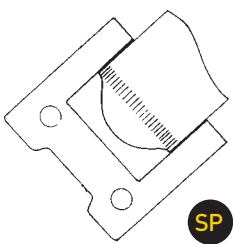

Where the shock absorber is imported by us, no numerical coding exists and therefore, only the alphabetical code applies.

c. Special combinations

Any combination which is unique to an application has been classed as "SP" eg: Special pressings fitted to the Mercedes 108, 111, 114 and 115 front shock absorbers as well as the 116, 123 and 126 front shock absorbers.

This also applies to the special plate fitted to the Peugeot 302 rear shock absorbers, and the stud plate fitted to the Ford Fairlane, Fairmont and Ranchero front shock absorbers.

3. Matching of shock absorbers

Our warranty terms state that any units fitted to a vehicle for which they are not listed in our catalogue are not covered. Therefore the information given on open and closed lengths and mountings in the grouping section should only be used to match a unit as a last resort. This is due to the fact that whilst two units may be interchangeable from an installation point of view, the valve settings may be substantially different, resulting in poor ride and handling when fitted to a vehicle for which they have not been engineered.

Contact Tenneco Helpline on 010 900 1850

NOTE: Using a shock that is "matched up" invalidates the guarantee.

TECHNICAL INFO ON GAS/OIL DISPOSAL OF OLD AND DEFECTIVE SHOCK ABSORBERS

FOR SAFETY REASONS, ALWAYS WEAR SAFETY GLASSES AND PROTECTIVE GLOVES.

- 1 Place shock absorber in a horizontal position.
- 2 Make sure the shock absorber is secure and cannot move during the drilling operation.
- 3 Before drilling, pull out the rod until fully extended.

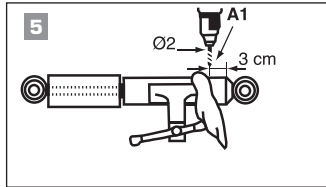

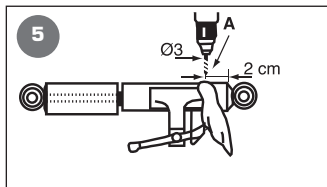

! With Ride Leveler shock absorbers, cut away the rubber sleeve and treat as twintube units.

- 4 Check whether the unit is a high pressure monotube, low pressure twintube or a conventional twintube type. All high pressure monotube shock absorbers have a special marking "high pressure - do not heat or open".

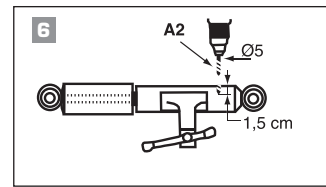

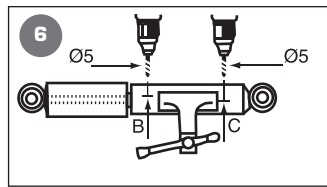

FOR HIGH PRESSURE MONOTUBES (25-30 bar):

- 5 Drill a small hole of 3 to 5 mm, 2 cm from the lower body end (A) in order to remove the gas. It is quite possible that oil may be forced out of the hole whilst drilling, and therefore precaution should be taken to restrict the flow by placing a cloth

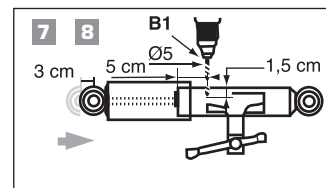

FOR LOW PRESSURE TWINTUBE (3-5 bar) or CONVENTIONAL TWINTUBE: (FIRST POINTS 1 TO 5)

- 5 Drill a hole of 2 mm, 3 cm from the lower body end in the reserve tube (A1).

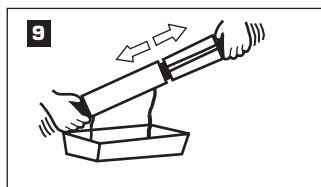

- 6 Drill two additional holes of 3 to 5 mm at (B) and (C) to remove the oil. (further at point 9)

- 6 After the gas pressure is gone, drill a 1.5 cm deep hole of 5 mm at (A2).

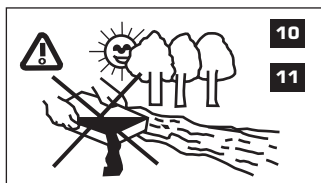

- 9 Move piston rod up and down to accelerate oil removal.

- 7 Compress the shock absorber by minimum 30 mm.

- 8 Drill another 1.5 cm deep hole of 5 mm, 5 cm from the top side (B1).

- 10 The shock absorber oil needs to be disposed of in an appropriate container (to be treated like motor oil), in accordance with the national waste disposal law.

- 11 Check with the local authorities for information about where the oil and remaining parts should be disposed of.

For Coverage Limitations, Process Requirements and specific Monroe warranty limitations visit the Monroe website.

EXCLUDED FROM WARRANTY

1. Claims where damaged mounting parts were used or reused such as rubber dirt shields, damaged bump stops, etc.
2. Monroe Ride-Levellers with air sleeve abrasion caused by incorrect mounting.
3. The warranty applies only if the original invoice for the part is provided to the dealer and the vehicle owner is the original purchaser.
4. Shock absorbers must be stored in horizontal position.
5. Cost of removal and installation is not included under warranty.
6. Normal wear and tear. All parts must be replaced in accordance with the vehicle manufacturer's recommended service schedule.
7. Any issues that occur due to the part not being fitted by a professional installer.
8. Products which have been modified or damaged by improper installation and/or use of incorrect installation tools, contrary to the specifications of the vehicle manufacturer and/or DRiV.
9. Product damage caused by accident(s).
10. Products damaged by installation on any other vehicle/ engine than indicated in the DRiV catalogue or its subsequent amendments.
11. Products that have been subject to misuse (racing and rally sport purposes, off-road usage with light vehicle (if not SUV's) unless a product it's explicitly deemed for such usage, accidental damage, incorrect installation, improper or untimely maintenance, or improper application.
12. Reconditioned or recycled products.
13. Inappropriate storage of the part: it is a requirement that parts are stored in dry and cool warehouse conditions.
14. Products that are past any expiration date that is mentioned on the product packaging.
15. Products affected by damage during transportation.
16. Prior to settlement of a claim, DRiV reserves the right to examine all related DRiV and non-DRiV parts involved.
17. This warranty does not affect your statutory rights.

ADDITIONAL 5 YEARS WARRANTY LIMITATIONS (for the regions where applicable)

1. Where shock(s) are not installed in accordance with Monroe's recommendations:
 - Both shock absorbers of one series (Original, OESpectrum) must be replaced on the same axle at the same time (except Monroe Intelligent Suspension RideSense).
 - Where applicable, Protection Kits (PK) and Mounting Kits (MK) must also be replaced at the time of the fitting. Claims against Monroe shock absorbers installed with old or previously damaged Protection Kit (PK) and Mounting Kit (MK) are excluded.
